Índice

1. Articulation Point in Graph

```
vector<int> graph[410];
set<int> ans;
set<int>::iterator it;

int dfs(int u){
    int less = vis[u] = times++;
    int filhos = 0;
    for(int i = 0; i< graph[u].size(); i++){
       if(vis[graph[u][i]]==0){
          filhos++;
          int m = dfs(graph[u][i]);
          less = min(less,m);
          if(vis[u] <= m && (u != 0 || filhos >= 2)){
```

```
            ans.insert(u);
         }
      }else{
         less = min(less, vis[graph[u][i]]);
      }
   }
   return less;
}
times = 1;
ans.clear();
dfs(0);
```

2. Bellman Ford

```
vector <pair<int, int> > edges;
int graph[MAXN][MAXN];
int dist[MAXN];

int N;
bool bellman_ford(int s) {
       int M = edges.size();
       memset (dist, INF, sizeof(int)*n);
       dist[s] = 0;
       for (int k = 0; k < N-1; ++k) {
              for (int j = 0; j < M; ++j) {
                     int u = edges[j].first;
                     int v = edges[j].second;
                     if (dist[u] < INF && dist[v] > dist[u] +
                         graph[u][v])
                            dist[v] = dist[u] + graph[u][v];
              }
       }
       //Negative Cycle
       for (int j = 0; j < m; ++j) {
              int u = edges[j].first, v = edges[j].second;
              if (dist[u] < INF && dist[v] > dist[u] + graph[u][v]) {
                     return false;
              }
       }
       return true;
}
```

3. Binomial Coefficient with DP

```
//Binomial Coefficient
//C(N, K) = N!/(K!(N - K)!)
//Dynamic Programming
int bin[N][K];

bin[0][0] = 1;

for (int n = 1; n < MAXN; n++) {
    bin[n][0] = 1;
    bin[n][n] = 1;

    for (int k = 1; k < n; k++) {
              bin[n][k] = bin[n - 1][k] + bin[n - 1][k - 1];
              if (bin[n][k] >= MOD) {
                     bin[n][k] -= MOD;
              }
    }
 }
```

4. Binomial Coefficient

```
Int nCr(Int n, Int k) {
       Int res = 1;

       if (k > (n >> 1LL)) {
              k = n-k;
       }
       for (Int i = 1; i <= k; i++, n--) {
              res = (res * n) / i;
       }

       return res;
}
```

5. Bipartite Check Algorithm

```
bool dfs(int node, int c) {
```

```
    if(color[node] != 0) {
        if(color[node] == c) {
            return true;
        } else {
            return false;
        }
    }
    color[node] = c;
    for(int i = 1; i <= n; i++)
              if(gr[node][i] == 1) {
                     if(!dfs(i, -c)) {
                            return false;
                     }
        }
    }
    return true;
}
```

6. Catalan

```
//Catalan numbers with DP
void getCatalan(int n){
    int catalan[n+1];
    int MOD = 100000000;
    for (int i=0; i <= n; i++){
        if (i==0 || i==1){
            catalan[i] = 1;
        }else{
            int sum =0;
            int l, r;
            for (int k=1;k<=i;k++){
                l = catalan[k-1] % MOD;
                r = catalan[i-k] % MOD;
                sum = (sum + (l * r) % MOD) % MOD;
            }
            catalan[i] = sum;
        }
    }
}
//Preprocessing Fatorial numbers and Answer in O(1)
Int catalan(int N) {
        Int ans = fat[2 * N];
        Int p = ((fat[N] * fat[N + 1]) % MOD) % MOD;
        ans *= modpow(p, MOD - 2, MOD);

        ans = ((ans % MOD) + MOD) % MOD;

        return ans;
}
```

7. Closest Pair

```
///----Closes pair with divide and conquer----///
struct point{
    double x, y;
    point(double a, double b): x(a), y(b){}
    point(){};
};

bool compareX(point a, point b){
    return a.x < b.x;
}

        }
    }
    return min(d, strip(stripArray,d));
}

sort(pos.begin(), pos.begin()+n, compareX);
double ans = closest(pos);
```

8. Coin Change

```
//Coin Change
int dp[1001];
int coins[] = {1, 5, 10, 25, 50};

dp[0] = 0;

for(int i = 1; i <= N; i++) {
        int min = 1000001;
    for(int j = 0; j < M; j++) {
                if(coins[j] <= i) {
                        int m = dp[i - coins[j]] + 1;
            if(m < min) min = m;
        }
    }
    dp[i] = min;
}
```

9. Convex Hull

```
//Convex Hull
struct point {
    int x, y;
    point(int x, int y): x(x), y(y){}
    point(){}
    bool operator <(const point &p) const {
        return x < p.x || (x == p.x && y < p.y);
    }
    bool operator==(const point &p) const {
        return x == p.x && y == p.y;
    }
};
ll cross(const point &O, const point &A, const point &B) {
    return (A.x - O.x) * (B.y - O.y) - (A.y - O.y) * (B.x - O.x);
}

vector<point> convex_hull(vector<point> &P) {
    int n = P.size(), k = 0;
    vector<point> H(2*n);

    sort(P.begin(), P.end());
```

```
    for (int i = 0; i < n; i++) {
        while (k >= 2 && cross(H[k-2], H[k-1], P[i]) <= /*change to < to
            remove equal points */ 0) k--;
        H[k++] = P[i];
    }
    for (int i = n-2, t = k+1; i >= 0; i--) {
        while (k >= t && cross(H[k-2], H[k-1], P[i]) <= /*change to < to
            remove equal points */ 0) k--;
        H[k++] = P[i];
    }
    H.resize(k);
    return H;
}
```

10. Convex Polygon Area

```
//Area de um Poligono Convexo
double area() {
	int N = 4;

	//Points
	int[] x = { 2, -4, 5, 2 };
	int[] y = { 5, 3, 1, 5 };

	double ma = x[N - 1] * y[0], mb = x[0] * y[N - 1];

	for (int i = 0; i < N - 1; i++) {
		ma += (x[i] * y[i + 1]);
		mb += (x[i + 1] * y[i]);
	}

	double ans = Math.abs((ma - mb) * 0.5);
}
```

11. Count used Digits

```
Int func(int val) {
	int digitCount = (int) log10(val) + 1;
	Int ans = 0LL;
	Int p = 1LL;

	for (int i = 0; i < digitCount - 1; i++) {
		ans += p * 9 * (i + 1);
		p *= 10;
	}

	ans += (val - p + 1) * digitCount;

	return ans;
}
```

12. Cycle Retrieval Algorithm

```
//It only works in graphs without compound cycles
bool inq[MAXN], vis[MAXN];

void dfs(int node, int parent, int len) {
	vis[node] = true;
	cle[node] = len;

	stk[stk_pointer++] = node;
	inq[node] = true;

       for (int i = 0; i < (int) graph[now].size(); i++) {
              int next = graph[now][i];
              deg[next] -= 1;

              if(deg[next] == 0) {
                     pq.push(next);
              }
       }
 }
```

66. Topological Sort - Recursive

```
void dfs(int x) {
   vis[x] = 1;
   for(int u = 0; u < n; u++) {
       if(vis[u] == 1 && graph[x][u] == 1) has = true;
       if(vis[u] == 0 && graph[x][u] == 1) {
          dfs(u);
       }
   }
```

```
    vis[x] = 2;
    order.push_back(x);
}
```

67. TriangleArea

```
double area(double a, double b, double c) {
       double s = (a + b + c) / 2.0;

       double area = sqrt(s * (s - a) * (s - b) * (s - c));

       return area;
}
```

68. Trie

```
//Trie
struct Trie {
    Trie *child[MAXN];
    int prefixes;
    int words;

    Trie() {
        int i;
        prefixes = words = 0;
        for(i = 0; i < MAXN; i++) {
            child[i] = NULL;
        }
    }

    void addWord(string s, int pos = 0) {
        if(pos == s.size()) {
            words++;
            return;
        }

        int letter_pos = s[pos] - 'a';

        Trie *t = child[letter_pos];
        if(child[letter_pos] == NULL) {
            t = child[letter_pos] = new Trie();
            t->prefixes = 1;
        } else {
            t->prefixes = t->prefixes + 1;
        }
        t->addWord(s, pos + 1);
    }

    int count(string s, int pos = 0, int k = 0) {
        if(pos == s.size()) return k;
        Trie *t = child[s[pos] - 'a'];
        if(t == NULL) return 0;
        return t->count(s, pos + 1, (prefixes == t->prefixes) ? k: k + 1);
    }
};
```

69. Union Find

```
//Union Find
struct UnionFind {
    int N, *id, *sz;

    UnionFind(int _N) {
        id = new int[_N];
        sz = new int[_N];
        for(int i = 0; i < _N; i++) {
            id[i] = i;
            sz[i] = 1;
        }
        N = _N;
    }
    int root(int i) {
        while(i != id[i]) {
            id[i] = id[id[i]];
            i = id[i];
        }
        return i;
    }
    bool find(int p, int q) {
        return root(p) == root(q);
```

```
    }
    void unite(int p, int q) {
        int i = root(p);
        int j = root(q);
        if(i == j) return;
        if(sz[i] < sz[j]) {
            id[i] = j; sz[j] += sz[i];
        } else {
            id[j] = i; sz[i] += sz[j];
        }
    }
};
```

70. Z Function

```
//Z-Function O(n) => Z[i] = biggest prefix of a substring starting from i
    which is as a prefix of s
vector<int> z_function (string s) {
       int n = (int) s.length();
       vector<int> z (n);
       for (int i=1, l=0, r=0; i<n; ++i) {
              if (i <= r) {
                     z[i] = min (r-i+1, z[i-l]);
              }
              while (i+z[i] < n && s[z[i]] == s[i+z[i]]) {
                     ++z[i];
              }
              if (i+z[i]-1 > r) {
                     l = i;
                     r = i+z[i]-1;
              }
       }
       return z;
}
```
